ECE MODEL BED HEAD UNITS

In specific care areas in the hospital, such as intensive care units, pre-operative patient rooms, post-operative recovery rooms. It is necessary to connect the patient to several different devices and depending on the condition of the patient, specially designed bedhead units that are equipment necessary for the patient's care to be connected manner near the patient's head, without the clutter of cables.

The aluminum profiles are drawn and anodized in natural color, however, the front caps can be electrostatic powder coated in a variety of colors in order to warm up the clinical atmosphere of the patient room with color, texture and material features and to complement the unit with a functional look.

The trunk profile of the bedhead unit that has an integrated accessories rail, allows for the connection of other equipment such as I.V. poles, monitor shelves, ventilator shelves, mayo tables, sphygmomanometers, etc. That may be used in specific areas like intensive care units.

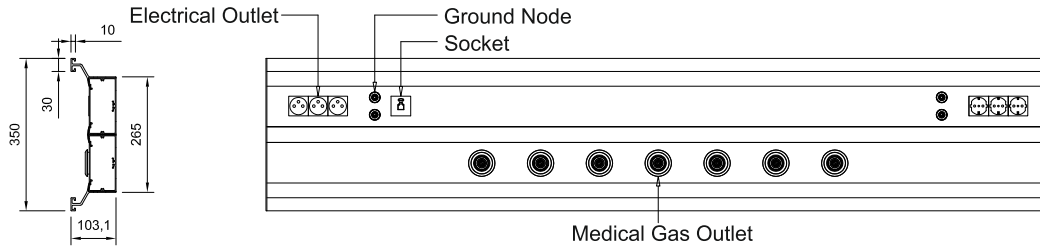

All equipment and accessories are within easy use for users.

The rail on the units have a load capacity of 10 kg per meter.

Ece Models are suitable for wall - mounted, vertical or ceiling suspended installation in any given length.

Wall mounting system by plugs and screws suitable for each support.

Different standards gas quick outlets - DIN, NF, BS.
